

Vehicle Durability Testing Using 5G

Millbrook helps customers to test vehicle durability using live reporting and 5G connectivity.

It provides a seamless connection and signal throughout Millbrook's test tracks to automatically transfer data and feed it back to engineers based remotely. A remote connection to the data logger allows live viewing and control of the data collection. The equipment that is used is connected to Millbrook's on-site, private LTE network at its 5G Test Bed.

Advantages

- Test vehicles are constantly connected
- Faults do not need to be recreated as accurate fault data is recorded automatically
- Automated data processing and statistical calculations can be performed for each shift/day, and as an ongoing cumulative report
